

REINFORCEMENT LEARNING-DRIVEN AUTONOMOUS SYSTEMS FOR SMART ROBOTICS AND INDUSTRIAL AUTOMATION

Chapter	Title	Page No.
1	Foundations Of Reinforcement Learning for Autonomous Robotics and Industrial Systems	11
2	Markov Decision Processes for Modeling Sequential Decision Making in Robotics	42
3	Policy Optimization Techniques For Efficient Reinforcement Learning In Autonomous Systems	74
4	Value Based Methods For Decision Making In Industrial Robotic Environments	107
5	Model Based Reinforcement Learning For Adaptive Control In Smart Robotics	138
6	Deep Reinforcement Learning Architectures For Complex Industrial Automation Tasks	169
7	Exploration And Exploitation Strategies In Reinforcement Learning For Robotics	202
8	Multi Agent Reinforcement Learning For Coordinated Industrial Robotic Systems	237
9	Simulation Environments for Training Reinforcement Learning Driven Robotic Systems	273
10	Transfer Learning Techniques For Accelerating Reinforcement Learning In Robotics	304
11	Safety Constraints And Risk Aware Reinforcement Learning In Industrial Automation	336
12	Real Time Decision Making Using Reinforcement Learning In Autonomous Robotics	372
13	Reward Design Strategies For Optimizing Industrial Robotic Task Performance	405
14	Integration Of Reinforcement Learning With Sensor Data In Smart Robotics	435
15	Deployment Of Reinforcement Learning Models In Industrial Automation Workflows	468
