

Deep Reinforcement Learning Applications in Autonomous Systems and Decision Making

Chapter	Title	Page No.
1	Fundamentals of Deep Reinforcement Learning in Dynamic Environments for Autonomous System Optimization	11
2	Policy Optimization and Actor-Critic Methods in Complex Decision-Making Frameworks	38
3	Integration of Model-Based and Model-Free Approaches for Robust Autonomous System Design	66
4	Multi-Agent Deep Reinforcement Learning for Cooperative and Competitive Autonomous Systems	95
5	Hierarchical Reinforcement Learning for Decision Making in Large-Scale Autonomous Networks	124
6	Transfer Learning and Domain Adaptation Techniques in Deep Reinforcement Learning for Cross-Domain Tasks	154
7	Curriculum Learning Strategies for Accelerating Policy Development in Autonomous Decision Systems	181
8	Asynchronous Deep Reinforcement Learning for Real-Time Adaptation in Resource-Constrained Autonomous Systems	210
9	Application of Proximal Policy Optimization for Stable Decision Making in Non-Stationary Environments	243
10	Deep Q-Network Architectures for Task Planning and Control in Autonomous Robotic Systems	269
11	Safe Exploration Techniques and Reward Shaping Strategies in Reinforcement Learning for High-Risk Environments	297
12	Combining Neural Architecture Search and Reinforcement Learning for Optimized Autonomous System Performance	324
13	Multi-Objective Reinforcement Learning for Balancing Efficiency and Safety in Autonomous Decision Making.	355
14	Distributed Reinforcement Learning for Scalability and Collaboration in Decentralized Autonomous Systems	380

15	Integrating Reinforcement Learning with Simulation Environments for Testing and Training Autonomous Decision Models	405
