

Intelligent Healthcare System

Ch.no	Chapter Title	Page No
1	Integrating IoT, AI, and Cloud Computing for designing Cyber-Physical Systems for Healthcare	14
2	Standards and Protocols for Interoperable Health Information Systems	45
3	Deep Learning Algorithms for Medical Image Segmentation and Classification	76
4	Natural Language Processing Techniques for Electronic Health Record Analysis	105
5	Predictive Modeling for Early Detection of Chronic Diseases	136
6	Development of Smart Wearable Sensors for Continuous Health Monitoring	166
7	Machine Learning Approaches to Pharmacogenomics and Personalized Drug Therapy	194
8	Identifying Disease Susceptibility in Genomic Sequencing utilizing AI	225
9	Automation in Diagnostic Laboratories for enhancing Efficiency and Accuracy	257
10	Rehabilitation Robotics in Adaptive Systems for Patient Recovery	285
11	AI-Driven Telehealth Platforms to Improving Accessibility and Patient Engagement	320
12	Conversational Agents in Healthcare: Design and Implementation	349
13	Implementing Blockchain for Secure Health Data Management	380
14	Privacy-Preserving Machine Learning in Healthcare Applications	413
15	Augmented and Virtual Reality Applications in Medical Training and Treatment	443
16	Scalability Challenges in Deploying Intelligent Healthcare Solutions Globally	474
