

Solar Thermal Technologies and Nano-Enhanced Phase Change Materials for High-Efficiency Electric and Solar Mobility

Chapter	Title	Page No.
1	Synthesis and Surface Functionalization of Engineered Nanoparticles for Disease Specific Drug Targeting	11
2	Integration of Nano-Enhanced Phase Change Materials for Efficient Thermal Energy Storage in Solar Systems	35
3	Thermophysical and Chemical Properties of Nano-Additives in Phase Change Materials for Enhanced Heat Transfer	63
4	Advances in Heat Transfer Fluids for Solar Thermal Energy Systems Using Nanoparticle-Based Enhancements	88
5	Smart Materials and Coatings for Improving Solar Absorption and Thermal Conductivity in Solar Technologies	112
6	Hybrid Thermal Management Systems Using Nano-PCM for Battery Cooling in Electric and Solar Vehicles	137
7	Phase Change Materials for Waste Heat Recovery and Thermal Regulation in Solar-Powered Vehicles	159
8	Thermal Energy Storage with Nano-PCM for Optimizing Performance of Solar-Assisted Hybrid Electric Vehicles	184
9	Impact of Nano-Enhanced PCMs on the Charging and Discharging Cycles of Lithium-Ion Batteries in EVs	211
10	Computational Modeling and Simulation of Heat Transfer in Nano-PCM-Based Thermal Energy Storage Systems	237
11	Design and Optimization of Solar-Assisted Charging Stations for Electric Vehicles with Thermal Energy Storage	264
12	Solar-Powered Hydrogen Fuel Cells and the Role of PCM in Hydrogen Storage for Sustainable Transportation	290
13	AI and Machine Learning for Real-Time Thermal Management in Electric Vehicles Using PCM Technologies	314
14	Integration of IoT and Smart Sensors in Solar Mobility for Energy Efficiency and Predictive Maintenance	339

15	Life Cycle Assessment and Economic Viability of Nano-Enhanced PCM in Electric and Solar Vehicle Technologies	363
