

Lightweight Cryptographic Algorithms for Secure IoT Devices

Chapter	Title	Page No.
1	Foundations of Lightweight Cryptography for Resource Constrained IoT Devices	14
2	Symmetric Key Cryptographic Primitives for Low Power IoT Architectures	42
3	Block Cipher Optimization Techniques for Embedded IoT Microcontrollers	69
4	Smart Hospital Infrastructure with AI Driven Workflow Automation and Resource Optimization for Efficient Healthcare Management	96
5	Lightweight Public Key Cryptography for Authentication in IoT Environments	121
6	Elliptic Curve Cryptography and Its Suitability for Energy Efficient IoT Devices	145
7	Post Quantum Cryptographic Algorithms for Future Ready IoT Networks	173
8	Hardware Accelerated Cryptographic Implementations for Smart Wearables and IoT Nodes	210
9	Comparison of Energy Efficient Cryptographic Libraries for Wireless Sensor Networks	239
10	Secure Firmware Updates in IoT Devices using Hash Based Signature Schemes	278
11	Authenticated Encryption Techniques for Secure M2M Communication in IoT	303
12	Secure Boot and Key Management Protocols for IoT Edge Devices	333
13	Cryptographic Support for Privacy Preservation in IoT Based Healthcare Systems	370
14	IoT Security Using Lightweight Cipher Suites in Constrained Application Protocols (CoAP)	399
15	Lightweight Cryptography and Blockchain Synergies in IoT Trust Management	431

16	Formal Verification of Lightweight Encryption Algorithms for Secure IoT Operations	458
