

Machine Learning Applications in E-Commerce, Finance, and Human Resource Management

Ch.no	Chapter Title	Page No
1	Data-Driven Approaches and Machine Learning Frameworks for Academic Performance Analysis	13
2	IoT-Enabled Smart Campus Ecosystems for Real-Time Monitoring and Student Engagement	38
3	Predicting Student Academic Performance Using Advanced Machine Learning Algorithms	67
4	AI-Driven Early Warning Systems for Dropout Risk and Passed-Out Prediction in Higher Education	89
5	Machine Learning and Hybrid Models for Placement Prediction and Career Path Forecasting	111
6	Entrepreneurship Prediction and Development through AI-Based Behavioral and Skill Analytics	138
7	Personalized and Adaptive Learning Pathways Using IoT and AI for Enhancing Student Success	165
8	AI and IoT-Integrated Frameworks for Stress Detection, Prediction, and Management in Faculty Communities	188
9	Machine Learning Models for Assessing and Enhancing Faculty Performance in Higher Education	212
10	AI-Powered Teaching Support Tools for Workload Optimization and Pedagogical Improvement	238
11	Predictive Analytics and Machine Learning Models for Assessing Educational Outcomes in Higher Education	263
12	IoT-Integrated Decision Support Systems for Institutional Planning and Academic Governance	291
13	AI and Sentiment Analysis for Understanding Student Feedback and Institutional Improvement	316
14	Reinforcement Learning Approaches for Adaptive Curriculum Design and Delivery in Higher Education	341
15	AI Ethics, Data Privacy, and Responsible Use of Emerging Technologies in Higher Education	363
