

Artificial Intelligence in Multi domain Systems for Intelligent Decision Making and Automation

Chapter	Title	Page No.
1	AI Enabled Decision Support Systems for Real Time Industrial Process Automation and Optimization	14
2	Machine Learning Based Predictive Maintenance Models in Manufacturing and Production Systems	44
3	Fuzzy Logic and Evolutionary Computing in Adaptive Control Systems and Process Engineering	75
4	Digital Twin and AI Integration for Predictive Modeling and Lifecycle Management of Engineering Assets	104
5	Deep Learning Architectures for Intelligent Image Analysis and Pattern Recognition in Healthcare	134
6	AI in Precision Medicine for Personalized Treatment Planning and Disease Prediction	165
7	Smart Biosignal Processing Systems for Remote Health Monitoring and Diagnostics	195
8	Intelligent Transportation Systems Using AI for Urban Traffic Control and Route Optimization	225
9	Smart Water Management Systems in Urban and Rural Infrastructure Development	256
10	AI Enabled Decision Making in Disaster Prediction and Emergency Response Management	286
11	AI Powered Cybersecurity Frameworks for Intrusion Detection and Threat Intelligence in Smart Infrastructure	317
12	Natural Language Processing for Automated Legal Reasoning and Document Analysis in E Governance	340
13	AI Based Smart Classroom Systems for Personalized Learning and Educational Outcome Analytics	362
14	Reinforcement Learning Techniques for Autonomous Navigation and Control in Robotics and Drones	391

15	AI Driven Smart Grid Management and Load Forecasting in Energy Distribution Networks	417
